Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1879 Excerpt: .found to contain about 80 per cent, of the shields of foraminifera, and many of these are almost identical in species with those whoso shields make up so large a percentage of the chalk. We are, therefore, warranted in supposing that the chalk has been formed in the same manner as the ooze now forming in the Atlantic. 101. The Tertiary Rocks.--The Tertiary rocks include all those between the chalk and the close of the Boulder drift period. They are usually divided into the Eocene, Miocene, Pliocene, and Pleistocene. These groups are distinguished by the percentage of existing shells which are found in their strata. During the deposition of the first three of these groups, the climate seems to have been gradually changing in the northern hemisphere, from a subtropical to a cold, temperate climate This is proved by the fossil remains which are found in them. Amongst the plants we find the leaves, fruits, and seeds of palms, cycads, pines, and also of exogenous timber trees. The animal remains include species of every existing order, except man. The fauna are especially noted for the abundance of gigantic quadrupeds. The glacial period, or pleistocene group, includes all those clays, sands, gravels, and boulders, which are generally known as the drift formation. These rocks owe their formation to glacial action, which, wearing down and smoothing the surface of the land, have carried along with them masses of rock, in the same manner as the ice cap which...
