

Projective geometry Volume 1

By Oswald Veblen

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 110 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1910 edition. Excerpt: . . . The coordinates of a double point $(xv \ x)$ must satisfy the equations $px_1 \ ax_1 \ bx_2$, $px \ cx_1 \ dx_2$. These equations are compatible only if the determinant of the system $\begin{vmatrix} a-p & c \\ 1 & bx_2 \end{vmatrix} = 0$, vanishes. This leads to the equation $a-p \ b \ c \ d - p$ for the determination of the factor of proportionality p . This equation is called the characteristic equation of the matrix representing the projectivity. Every value of p satisfying this equation then leads to a double point when substituted in one of the equations (3); viz. , if p , be a solution of the characteristic equation, the point $(xv \ ag \ (-b, a-pl) \ (d-pv-c)$ is a double point. In homogeneous coordinates the cross ratio $R(AB, CD)$ of four points $A (av \ a^3)$, $B (bv \ b^2)$, $C (cv \ c^2)$, $D (dv \ d)$ is given by $(ac) (be) (ad) (bd)$ where the expressions (ac) , etc....

Reviews

It becomes an awesome publication that I actually have actually read. It really is written in simple terms and not difficult to understand. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Talia Cormier**

This pdf is fantastic. Sure, it can be engaging, nevertheless an interesting and amazing literature. It's been developed in a remarkably straightforward way and is particularly merely after I finished reading through this publication where in fact transformed me, change the way in my opinion.
