## Bulletin Volume 150-166

By Ohio Agricultural Station

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 edition. Excerpt: .birds and insects with long bills or probosces, such as the humming birds and the hawk moths which lay the eggs of the tobacco worm, thus contributing to cross pollination, the tobacco blossoms are self fertile without insect or other visitation. Their adaptation to insect visitation and attraction, through the nectaries of the blossom, are but a possible co-operation in the widespread cross pollination secured in the vegetable kingdom. If, therefore, we wish to crosspollinize, the blossoms must be emasculated by removal of the immature anthers or pollen sacs, at a time just previous to the full opening of the tobacco Diossom. This period is indicated both by the development of the corolla of the flower, including its change of color, and by the slight yellowing of the anthers, or pollen sacs, at the same time. The emasculated blossoms must then be protected from...
