Some years ago I noticed this result in a paper published in the Medical Gazette, in which I first pointed out the serious error of regarding the green fseculent discharges so often noticed in infancy as owing their colour to an excess of bile, tracing their ti t to altered blood, and shewing that this condition should be regarded as a form of melaina, and the too popular treatment by mercurials repudiated. If bile be agitated with animal charcoal and filtered, the colouring matter is removed, and by careful evaporation the white lustrous powder I now shew you is obtained; this decolourised bile may, after removing the little fat it contains, be obtained in a crystalline form. The specimen I now she. v you is in fact bile, freed from mucus, fat, and pigment, and in this state is a bilate of...
