Numerical Methods in Photonics (Paperback)

By Andrei V. Lavrinenko, Jesper Laegsgaard, Niels Gregersen

Taylor Francis Ltd, United Kingdom, 2017. Paperback. Condition: New. Language: English . Brand New Book. Simulation and modeling using numerical methods is one of the key instruments in any scientific work. In the field of photonics, a wide range of numerical methods are used for studying both fundamental optics and applications such as design, development, and optimization of photonic components. Modeling is key for developing improved photonic devices and reducing development time and cost. Choosing the appropriate computational method for a photonics modeling problem requires a clear understanding of the pros and cons of the available numerical methods. Numerical Methods in Photonics presents six of the most frequently used methods: FDTD, FDFD, 1+1D nonlinear propagation, modal method, Green s function, and FEM. After an introductory chapter outlining the basics of Maxwell s equations, the book includes self-contained chapters that focus on each of the methods. Each method is accompanied by a review of the mathematical principles in which it is based, along withã sample scripts, illustrative examples of characteristic problem solving, and exercises. MATLAB (R) is used throughout the text. This book provides a solid basis to practice writing your own codes. The theoretical formulation is complemented by sets of...

Reviews

I actually started out reading this book. It can be packed with wisdom and knowledge I discovered this ebook from my dad and i suggested this book to understand.

-- Prof. Barney Harris

An incredibly wonderful ebook with lucid and perfect answers. It is written in easy words instead of difficult to understand. Its been printed in an exceptionally easy way in fact it is simply following i finished reading this publication in which really modified me, modify the way i think.

-- Mr. Keyshawn Weimann
